Andrew Boudousquie

Overview

Provide an easy to use app that will allow the user to see current information of bars, restaurants and nightclubs such as admission fees, wait times notifications, and venue descriptions.

Also allow uses to register, login, or continue as a guest which will take them to an interactive map that will display venue icons specific to each venue.

- Bars are represented by a martini icon.
- Restaurants are represented by a fork and knife icon.
- Nightclubs are represented with a disco ball icon within description details.

More Features

The map is color coded. Green represents the shortest wait time, yellow represents a medium and a red represents a very long wait time.

Clicking on an icon brings up the venue. It brings up the name of the restaurant or bar, a wait time and admission fee if applicable.

Clicking See More brings up whether the owner has set a notification, if the venue is closed or open, the wait time, admission fee, their website, address and phone number.

Finally, you can Check In by clicking the check mark and give a wait time and admission fee.

Summary - Future Plans

A color coded spectrum map, instead of set colors.

A user being able to click on a venue and have the app notify the user when the venue is below a certain wait time.

Put the hours that the venue are open instead of open now or closed.

Implementing user reviews in the check in window.

Showing venue pictures on the venue window.
